

GOVERNMENT DEGREE COLLEGE: KARVETINAGARAM

Clean and Green Program (2023-24)

The **Clean and Green Program** is typically an initiative aimed at promoting environmental sustainability and improving the cleanliness of public spaces. This program can take various forms depending on the region or organization implementing it, but the general goals often include:

1. **Waste Management:** Encouraging proper disposal, recycling, and reduction of waste through awareness campaigns, waste segregation, and the establishment of recycling bins.
2. **Tree Planting and Green Spaces:** Promoting afforestation, reforestation, and the creation of green areas in urban spaces to help with air purification, reduce the urban heat island effect, and provide recreational spaces.
3. **Pollution Control:** Reducing pollution, whether it be air, water, or soil, through initiatives such as controlling industrial emissions, reducing plastic waste, or encouraging clean energy sources.

4. **Community Awareness and Education:** Engaging local communities in environmental education to promote sustainable practices such as water conservation, energy-saving, and using eco-friendly products.
5. **Sustainable Practices:** Encouraging sustainable lifestyles, including the use of renewable energy, reduction of carbon footprints, and sustainable agriculture.

Clean and Green Program was conducted in our College Campus by NSS Unit on 03-06-2023

**Clean and Green Program was conducted in our College Premises by NSS Unit
in association with NCC on 28-10-2023**
